                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to viral vectors and methods for producing transgenic plants that express heterologous DNA that encode a ruminant lysozyme, preferably bovine. This lysozyme protects against diseases caused by plant pathogens particularly bacterial pathogens. The method is useful for producing bovine lysozyme in host plants e.g. grapevines. Plasmid encoding a recombinant plant virus which comprises a bovine lysozyme encoding nucleic acid, is useful for producing bovine lysozyme protech which acts as an anti-Xylella reagent for development of a recombinant source of BoLys protein for treating grapevines against Pierce's disease (PD). The method is useful for protecting grapevines against Xylella fastidiosa bacterium infection that causes PD. The present sequence is bovine lysozyme DNA.

                                                                                                                                                                                                                                                                                                                                                                               The invention relates to viral vectors and methods for producing transgenic plants that express heterologous DNA that encode a ruminant lysozyme, preferably bovine. This lysozyme protects against diseases caused by plant pathogens particularly bacterial pathogens. The method is useful for producing bovine lysozyme in host plants e.g. grapevines. Plasmid encoding a recombinant plant virus which comprises a bovine lysozyme encoding nucleic acid, is useful for producing bovine lysozyme bovine lysozyme in a plant. It is also useful for producing bovine lysozyme protein which acts as an anti-Xylella reagent for development of a recombinant source of BoLys protein for treating grapevines against plerce's disease (PD). The method is useful for protecting grapevines against xylella fastidiosa bacterium infection that causes PD. The

                                used in the transgenic plant of the invention. The transgenic plant is resistant to plant pathogens and contains heterologous DNA encoding a ruminant or ruminant-like lysozyme, the plant expresses sufficient levels of the lysozyme to render it less susceptible to the pathogens than the wild type plant. The plants are resistant to bacterial pathogens such as

The 3'-noncoding sequence does not contain a polyadenylation signal or a poly (A)+ tail. The 5'-terminus does not contain the ATG triplet corresponding to the translation initiation codon fo the pre-lysozyme C2 mRNA. Thus the CDNA insert encodes 16 amino acids amino-terminal to the

The lysozyme encoded by this sequence has a greater ability to lyse gram negative bacteria than hen egg white lysozyme and also has a greater stability. The lysozyme may be applied directly to treat or protect plants such as potatoes, tobacco; tomatos, carrots, apples, sunflowers, petunias and violets from plant pathogens such as Pseudomonas, Agrobacterium, Xanthomonas, Erwinia and Clavibacter.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     gene;
```

The invention relates to a method of diagnosing (I) the onset or correct progression of benign prostatic hyperplasia (BPH), or screening (II) for corridentifying an agent that modulates the onset or progression of BPH.

CC The method is based on changes in gene expression in BPH tissue isolated from patients exhibiting different clinical states of prostate compared to normal prostate tissue. (I) comprises the properties of one or more genes in prostate cells (II) comprises preparing a first gene expression profile correction the subject that are differentially regulated compared to normal corrections the subject that are differentially regulated compared to normal corrections of BPH cells of one or more genes in prostate cells (II) comprises preparing a first gene expression profile correction as econd gene expression profile of the agent exposed (I) is made to proparing the first and second gene expression profiles. (II) is useful for diagnosing the onset or progression of BPH. (II) is correctly in a depart that modulates the onset or progression correctly in a tissue or cells, by comparing the expression correctly in a tissue or cells to the expression level in a tissue or cells, by comparing the expression correctly of genes given in the database, and displaying the compared to the expression level in BPH. Agents using (II) are useful for treating BPH or prostate cancer. ABK64106-ABK64860 represent human contains the prostatic hyperplasia gene sequences of the invention.

                                                Human lysozyme DNA can be used to obtain transgenic animals, e.g. mice. It can also be produced by culturing animal cells, and it can promote the genetic expression of these animal cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   It is useful for effective expression of human lysozyme in yeast or animal cells. Also, DNA encoding various proteins can be linked to the 3' end of the HL signal peptide so that it is downstream of the promoter of the expression vector. Expression of such proteins is possible in E. coli, Bacillus subtilis, yeast or animal cells. Lysozyme

Novel macrophage-expressed nucleic acids and polypeptides for diagnosis and treatment of inflammatory, autoimmune, neurological, myeloid or lymphoid cell disorders, cancer and for promoting wound healing

Claim 1; Page 139-140; 158pp; English

CC differentiation and survival of pluripotent and totipotent stem cells call differentiation and survival of pluripotent and totipotent stem cells cof bio-pharmaceuticals, development of bio-sensors and transplantation. CC The protein is used to manipulate stem cells in culture to give rise to cof bio-pharmaceuticals, development of bio-sensors and transplantation. CC The protein is used to manipulate stem cells in culture to give rise to convice protein is used to manipulate stem cells in culture to give rise to by illness, accidental damage or genetic disorders, induces the clis and is useful for the treatment of central and peripheral nervous system conditions and neuropathies, such as Alzheimer's, Parkinson's disease, conditions and involved in comparative or chemokinetic activity, regulation of haematopolesis and conditions or periodontal disease and for regulation of haematopolesis and conditions or periodontal disease and for regulation of bone, cartilage, conditions or periodontal disease and for regulation of bone, cartilage, conditions or liver fibrosis, immune deficiencies and disorders such as severe combined immunodeficiency (SCID), bacterial or fungal infections, cartilage, considered in thrombolysis or thrombosis is useful in treatment of coagulation and other haemostatic events in treating wounds resulting constrains contacts of the protects of the conditions of the combined in the conditions and the conditions of the combined conditions are such as asthma or other respiratory problems and is involved in thrombolysis or thrombosis is useful in treatment of coagulation or deficiency (SCID) and the combined conditions or the conditions of the conditions of the combined conditions and the conditions of the combined conditions and the conditions of the combined conditions of the combine reperfusion injury, shock, sepsis, immune responses, cancer and myeloid leukaemia and myelodysplastic syndromes. The protein exhibits activity relating to angiogenesis, cytokine, stem cell growth factor activity an transgenic animals. Macrophage-expressed molecule is useful treating inflammatory conditions such as nephritis, Crohn's disease, ischaemia-The present invention relates to an isolated macrophage-expressed cDNA its protein. The invention is used in gene therapy and in creating of male temale subjects

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polyperase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping are also used in diagnostics as expressed sequence tags (for identifying expressed genes. (I) is useful in gene therapy techniques (II), (II) is useful for generating antibodies against it, detecting or GC (II), (II) is useful for generating antibodies against it, detecting or GC a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II), (I) and (II) are useful for treating GC disorders involving aberrant protein expression or biological activity. GC diagnostics, forensics, gene mapping, identification of mutations in GC diagnostics, forensics, gene mapping, identification of mutations or responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and GC amino acid sequences. AAS64197-AAS94564 represent novel human of GC diagnostic coding sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1512 BP; 438 A; 308 C; 312 G; 454 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; SEQ ID No 1685; 103pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) selecting a composition for inhibiting prostate cancer in a patient;
(f) assessing the prostate cell carcinogenic potential of a compound;
(g) determining whether prostate cancer has metastasized in a patient;
(h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABL6164 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the creatment of cancer such as colon, breast, stomach, lung, thyroid, opesophageal, ovarian, kidney, prostate or pencreatic cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       02-OCT-2000;

The bank was tested by hybridising with two radio-labeled 17-mer oligonucleotides (equiv. to the AA sequences 26-31 and 63-68 of HLZ). Clones isolated were designated pHL 14-1; pHL21 and pHL 23 (contg. an approx. 500 bp insert) and pHL8 (contg. a 300 bp insert).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                    Sequence contained in plasmid pHLZ100. Apart from the four N-terminal amino acids, it encodes the entire sequence of human pre-lysozyme C of placental origin in addition to a translational stop signal. The mature lysozyme C corresponding to the pre-lysozyme C encoded by AAN92054 has the same AA sequence as human milk lysozyme. AAN92054 differs from the nucleotide sequence of the cDNAs encoding human pre-lysozyme C isolated from human histlocytic lymphoma cell line[U-937 (see FT tags a and b). However, these nucleic acid differences do not alter the amino acid
                                                                                                                                                                                                                                                                                                                                                             Prodn. of animal lysozyme C from pichia pastoris by secretion consists of P. pastoris promoter and terminator DNA
